Post subject: Shout Box embeded in Forum

This is the Shout Box that I think Gremmie did some fixes to for RavenNuke. I did some regex updating to the block and added a new file you can include in the forums.

http://trickedoutnews.com/nuken/Shout_Box.zip

Once you install it and activate the module, open and edit modules/Forums/index.php, modules/Forums/viewforum.php and modules/Forums/viewtopic.php

In each of those files find:

```
include_once("modules/$module_name/includes/page_header.php");
```

after add

```
include_once 'modules/Shout_Box/shout.php';
```

There are a lot of config settings in the Shout Box admin section as well.

Works great.

Thanks Rob

I updated the Shout Box download. It still has several areas that could use clean up, but I removed the POSIX regex and replaced them with the PCRE regex for php 5.3 compatibility. I also added a function to make links clickable if allowed in the shout box. This will not make existing links clickable, only new ones.
